

Science, research and consultancy for fruit cultivation

Institute of Applied Pomology (IPSAD) is a scientific institution where applied research is conducted in many disciplines related to orchards. Special emphasis is put on innovative methods of plant protection and the efficacy evaluation of plant protection products and growth regulators.

Our activities concentrate on organization of trainings, audits, consultations in orchards, conducting resistance tests for pesticides and many others. Thanks to our international cooperation we organize study visits to foreign scientific institutions as well as production sites.

Science, research and consultancy for fruit cultivation

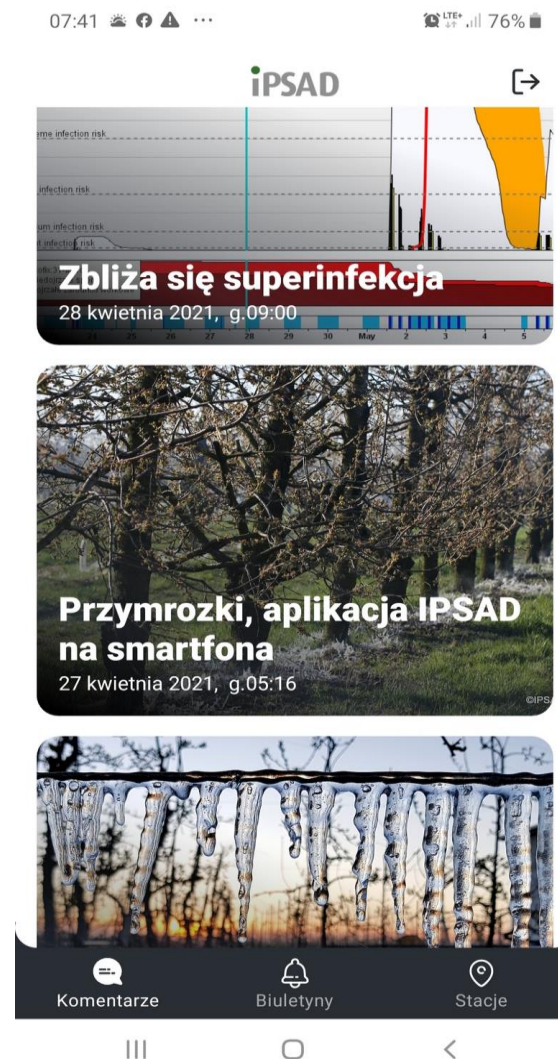

All research and tests are carried out both in the our laboratory and field experimental station. Our professionals are well-known scientists and advisors with a long practice. In our work we use modern research equipment and the network of meteorological stations connected to advanced agronomic testing equipment. Our own filed trial orchard give us the opportunity to conduct many experiments on site however we also cooperate with other European scientific institutions and farms.

More than 20 years of experience in giving advice...

... allows us to find rational solution for agrotechnical problems and fulfil growers needs in the area fruit production.

Anyone interested in cooperation with us can contact us directly or are interested or through the information **SIMPLE & ONLINE APPLICATION** where farmers will find recommendations and opinions on current practical issues related to the production of fruits.
